Treated Seed Press Inquiry Response Addressing Rick's Concerns.docx

Hi Justin,

I need YOU (not one of our scientists) to look over this. Brian helped in drafting but he is out today. Can you review please with the lens that this is a comms piece and not a science piece. See very short deadline. Thanks!

Subject: FW: FOR OCSPP IO REVIEW: Revised Response to address Rick's Comments for Press inquiry on treated seeds; DDL: ASAP
Importance: High

Hi Everyone,

This press inquiry is still open. We hope to finish it up today.

Deliberative Process / Ex. 5

In the response below, I tried again, with changes in red. But as I am not a scientist, this definitely needs your review!

Please edit in the attached document, by **3:00 this afternoon**.

INCOMING:

Here at DTN we are working on a series of stories on the environmental crisis unfolding in Mead, Nebraska due to mismanagement of discarded treated seed. One part of the coverage will focus on what is happening specifically at AltEn in Mead. Another part will take a broader look at the use of treated seed in the agricultural industry over the past 10 to 15 years. We have several questions for EPA. Our deadlines are shifting, and I know these are a lot of questions, but if we could get responses by the end of this week or early next week, that would be very much appreciated. Thanks!

1. NDEE has said EPA is involved now in the Mead situation. What exactly is EPA's role in the cleanup? Is the agency considering designating AltEn has a Superfund site?

RESPONSE: **Deliberative Process / Ex. 5**

Deliberative Process / Ex. 5

2. Seed treatments fall under the treated article exemption in FIFRA. How exactly are pesticides used in seed treatments tracked, monitored or managed differently by EPA (as opposed to foliar-applied pesticides) as a result? (RD)

RESPONSE: **Deliberative Process / Ex. 5**

Deliberative Process / Ex. 5

3. Does the treated article exemption continue to apply for EPA when the pesticides in the treated seed were concentrated in both the water and the solid waste produced at AltEn? Does EPA still maintain this situation falls under the treated seed exemption?

RESPONSE:

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

4. Does EPA have any information on how much treated seed is discarded each year by industry? Does EPA have any data or research on how pesticide-coated seed can be disposed of safely?

RESPONSE:

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

5. Does EPA know where all the seed industry's discarded treated seed goes – to what facilities and in what amounts? Is there any federal monitoring of amounts of discarded pesticide-coated seed (like the huge amounts going to AltEn) or any monitoring of water and soils near facilities that dispose of treated seed?

Deliberative Process / Ex. 5

6. Does EPA know how much pesticides (both insecticides and fungicides) are applied each year via seed treatment? If not, how can the agency correctly produce risk assessments for human health and the environment for seed treatment active ingredient registrations, such as the recent reviews of neonicotinoids?

RESPONSE:

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

7. Do EPA's risk assessments for the fungicides and insecticides found on treated seed consider the acute and chronic risks to humans and the environment from treated seed disposal methods? Do they consider the possibility of large accumulations of treated seed in landfills and other disposal facilities?

RESPONSE:

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

8. **Is EPA aware of the growing research, including some from USGS scientists, on how frequently neonicotinoids are found in American waterways? Was this data used in EPA's most recent registration reviews of neonicotinoids? Does EPA know what this level of regular human exposure to neonicotinoids means for human health?**
9. **Is EPA doing any research on how frequently fungicide seed treatments might be found or persisting in American waterways and soil? Does EPA have any data on how regular exposure to these active ingredients might mean for human health?**

RESPONSE FOR 8 & 9:

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

10. Will EPA reconsider the treated article exemption for treated seed, in light of the situation in Mead, Nebraska, the growing data on neonicotinoids found in water, and the continued lack of data on how much pesticides are applied via seed treatments? Or will seed treatments continue to be exempted from full EPA regulation?
11. What is the status of a petition for EPA to more fully regulate treated seed, submitted in 2017? (<https://www.epa.gov/petitions/petition-regulate-coated-seeds-under-fifra>)
